Fenesta Aluminium Series – Seamless Luxury

Aesthetics combined with innovation at its best, presenting the luxury range of Aluminium windows and doors.

This series is a minimalist, ultra-modern style statement designed to enhance the luxury quotient of living spaces.

Aluminium is extremely light with high strength to density ratio. It is sustainable, enjoys superior longevity and enhances the aesthetics.

Characteristics like these have made it a preferred choice for the real estate sector and has been in use since 1930 to construct several iconic landmarks.

Aluminium – The natural ‘Green’ material

After Silicon, Aluminium is the most abundantly available material in nature, i.e. on Earth's crust. Aluminium can be recycled infinite number of times without losing any of its inherent properties.

In fact, it is 100% recyclable! And what's more? The recycling can be done at just a mere fraction of the energy consumption of the initial input.

Over the years, the production process of Aluminium has been made even more efficient and the carbon footprint has been reduced by nearly 40%!

Usage of Aluminium as a replacement of wood in windows and doors, reduces deforestation and, in turn, global warming.

Fenesta Aluminium Series – The Informed Choice

The benefits of choosing Fenesta Aluminium Series are truly diverse

A. Minimalistic Design

Fenesta's design philosophy centres around minimalism, an essence of the modern times. Gone are the days of bulky windows and doors occupying large space. Fenesta Aluminium windows and doors are seamless, contemporary and effortlessly elevate the aesthetics. The versatile products transform living spaces with new dimension of substance in simple yet elegant style.

B. Versatile Color Range

You can enhance the color of your home or office interiors with Fenesta Aluminium windows and doors. These are available in 6 colors- White, Walnut, Light Oak, Diamond Grey, Champagne Gold, Midnight Black.

C. Design Flexibility

With Aluminium framing options, imagination is limitless. It possesses an inherent strength of flexibility hence making the manufacturing of windows and doors possible to exact specifications. With an endless array of systems, finishes and glass options, Aluminium offers a vast range of opportunities. From the cost-effective to most elaborate systems, Fenesta Aluminium Series also delivers excellent thermal performance.

D. Durability and Low Maintenance

Aluminium is corrosion-resistant which makes this material low-maintenance. Fenesta's Aluminium windows are resistant to wear and tear caused by the harsh weather. They do not split, crack, swell or lose shape ensuring durability and elongated product life.

E. Recyclability

Aluminium is known to have the highest recycling ability with least amount of energy required. As a result, it is environmentally sustainable and 'green'. This inherent property differentiates it from other framing resources.

Ultra Luxury Series

The Ultra Luxury Series is enhanced with the power of Thermal Break. Built to last, it offers high aesthetic value and provide solutions to modern day problems. It is durable, innovative and eco-friendly.

Thermal Break

Thermal Break, which is better known as 'insulation within the window' is a continuous barrier between the inside and outside window frames that insulate against heat transfer. The interior and exterior metal frames of the window sash are bonded with a layer of Polyamide that keeps the interior space of windows at a more comfortable temperature, impacting the room temperature as well.

Sleek Finish

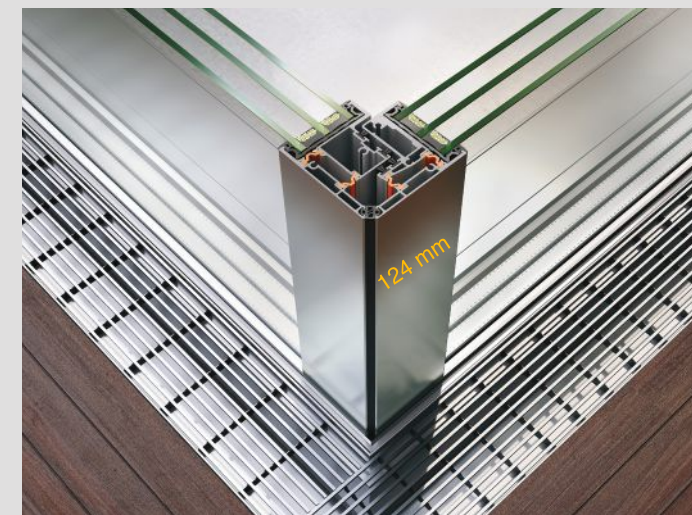

Thermal Break System

Slim Line Slider Doors (Thermal Break System)

Fenesta's range of Slimline Sliding Doors offers minimally visible aluminium sight lines, which maximises the view you get. With a great balance of functionality and style, these Aluminium doors add exquisiteness to the façades they are used in.

Features

- Thermal Break profile and double thermal break outer frame offers high energy efficiency
- Aluminium frame concealed within the walls, maximising natural light in the room
- Minimal sightlines of 25 mm at interlock and submerged threshold
- Special concealed channel allows for hassle-free water drainage
- Up to 500 kgs weight capacity – offers the possibility of installing large and special glasses
- Options also available in corner slider

Also Available in Corner Slider Design

Thermal Break System

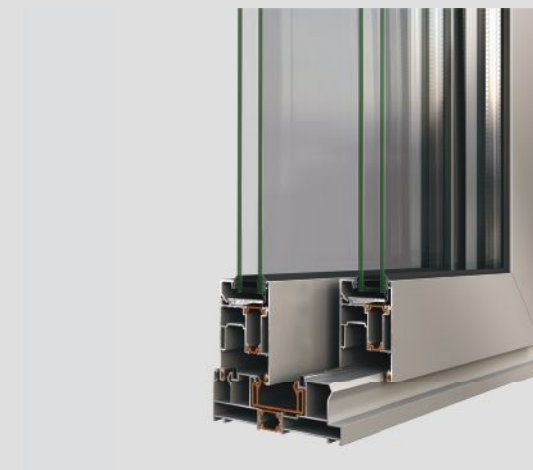

Large Aperture Size

Lift & Slide Door (Thermal Break System)

Fenesta innovates with the new Ultra Luxury Lift & Slide system. This is a much sought-after choice for covering large spans that link inside with outside. The robust system provides high level of thermal insulation and flexibility in construction because of profile stiffness. These stunning looking doors glide back and forth on feather touch Inox rollers, effortlessly which are incredibly smooth to operate.

Features

- High level of thermal insulation
- Child safety mechanism with dampener
- Large aperture sizes (up to 4 m height and 350 kgs sash weight)
- Resistance to high speed winds upto 3000 Pa
- Flexible system – 2 track and 2 track with mesh
