

Fenesta ProTec™

WELLNESS BY DESIGN

The *evolution* of home

Homes today are no longer just places to return to—they are where we work, learn, connect and unwind.

As life moves indoors, the quality of our environment matters more than ever. Light, air, silence and comfort shape everyday wellbeing.

While modern living brings convenience and connectivity, it also introduces new environmental challenges.

Creating a healthier indoor environment today means addressing not just what we see - but also what we don't.

ELECTROSMOG

An Invisible part of
modern living

Today's homes exist within a dense network of wireless signals, digital devices and communication systems creating a constant layer of electromagnetic emissions within our living spaces.

This invisible presence is known as electrosmog.

Usually unnoticed, but continuous exposure may lead to various health issues such as **fatigue, sleep disturbances, headaches & lack of concentration.**

Fenesta has always helped create quieter, cleaner, more comfortable homes.

With Fenesta ProTec™, that promise evolves further.

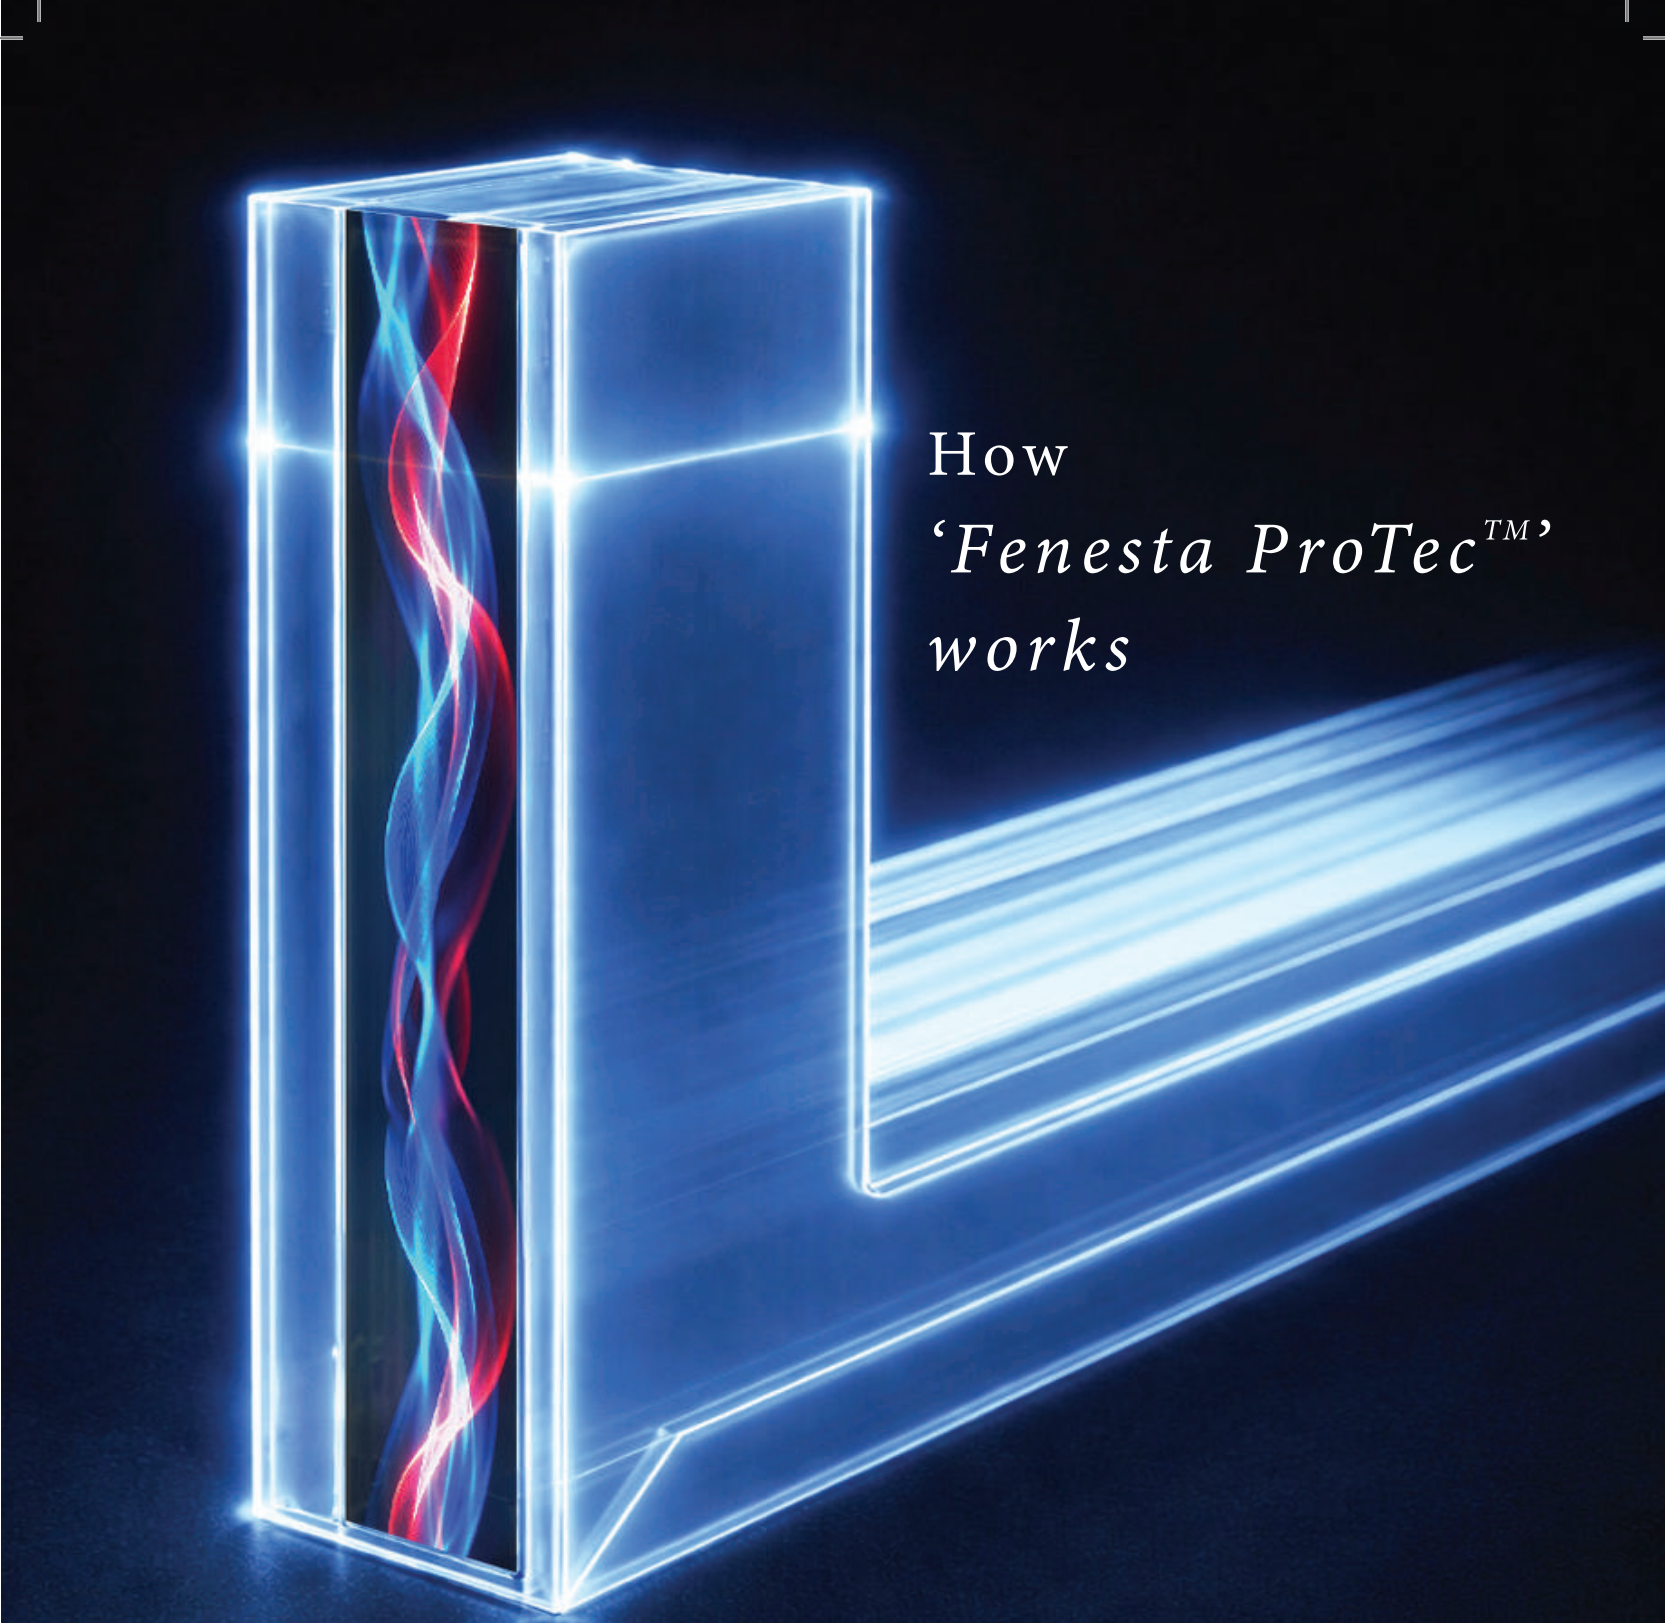

Designed to address the possible harmful effects from the growing presence of electrosmog, 'Fenesta ProTec™' Window &

Doors are designed to make indoor spaces safer and more biologically compatible for everyday living.

No add-ons. No external systems. Just seamless protection built into the structure itself.

Because a healthier home begins with a protection from elements that you cannot see.

How *'Fenesta ProTecTM'* works

Fenesta ProTecTM integrates a specialised layer strip within the window & door system.

This advanced technology, powered by Environics, is designed to minimise the potential harmful effects of electrosmog and make it compatible to the human body.

While it continues to work quietly in the background, daily connectivity inside the home remains uninterrupted.

Mobile networks, Wi-Fi usage and smart devices function normally within the indoor environment.

By embedding this directly within the architectural structure, **it transforms windows and doors into active contributors to indoor wellness.**

Protection becomes a permanent part of the home rather than an added intervention.

Designed for Modern Living

Electrosmog Effect Minimisation

An integrated advanced layer strip, powered by Environics technology, is embedded directly within the window and door structure to minimise the potential harmful effects of electromagnetic radiation.

Seamless Connectivity

Mobile networks, Wi-Fi and smart devices continue to function normally. The technology works around the digital life, not against it.

Available Across Fenesta Systems

Compatible with Fenesta's wide range of window and door designs - no separate installation, no visible hardware.

Built to Last

Maintains Fenesta's trusted standards of quality, safety and longevity.

Clinically Tested & Validated

Environics technology has been independently tested by leading medical institutions such as AIIMS, Medanta, Apollo and Max Healthcare and validated against measurable health parameters - particularly for individuals in close proximity to multiple smart devices and electrical systems.

A Space that Feels Better Everyday

◇ **A calmer home, by design**

Electrosmog is invisible - but its effects may not be. Fenesta ProTec™ is designed to create a more biologically balanced indoor environment, quietly working in the background so your family can rest, focus and thrive.

◇ **A healthier indoor environment**

Helps minimise the harmful effects of electromagnetic load inside your home - supporting better sleep, sharper focus and reduced everyday fatigue.

◇ **Protection that never interrupts**

No external systems. No add-ons. No maintenance. Once installed, Fenesta ProTec™ works silently and permanently - protection becomes a feature of your home, not an afterthought.

◇ **Complete living comfort**

Beyond electrosmog, Fenesta ProTec™ continues to block noise, dust, pollution, rain and extreme weather, delivering holistic home wellness from a single solution.
